You will thank us later!**

Why invest with Pleiade Investments?

We are a highly experienced group with analysts with proven track records. Our investments opportunities address all types of investors from conservative to the aggressive types.

Table showing statistical results* of our portfolios based on historical data.

<u>Portfolio</u>	<u>Expected Return</u>	<u>Historic Volatility</u>	<u>Sharpe Ratio</u>
A	8.21%	1.24%	6.67%
B	2.43%	0.86%	2.83%
C	7.77%	1.13%	6.80%

* All the figures are solely based on historical performances and do not guarantee the same outcomes for future investments.

Are you looking for higher returns, while still holding a diversified portfolio with an optimized level of risk?

Our recommendation is to have a look at Portfolio C's offering. The allocation in Portfolio C aims to bring better returns for investors who look for higher profits and lesser risk. Its volatility is at the reduced level of around 1.13%, which is in the middle ground compared to our other offerings. However, its Sharpe Ratio is the highest among our investment opportunities, which proves its efficiency in terms of units of return per units of risk. Moreover, Portfolio C has achieved the lowest coefficient of variance at the level of 0.14, in contrast to Portfolio A at 0.15 and Portfolio B at 0.35. Its expected return is considered in the higher range in the spectrum of returns of our portfolios and makes use of shorting, leading to an increased diversification and less exposure to shocks from the Tech sector. This may be the best investment opportunity for you!
